

## How to set a Straight Six Mechanisms that accepts the new £1 coin so that it will not also accept the old £1 coin...

The latest straight six mechanism will accept both the new and old £1 coin. When the old £1 is demonetised in Autumn 2017 you may want to set your mechanism so that it will accept the new £1 coins and no longer accept the old ones.

### This can be done by following these instructions:

- Raise the coin selector bridge SS3219 by undoing nuts SS3235 and turning EACH of the screws SS3223 one whole turn at a time ANTICLOCKWISE until the old £1 coins will not pass.
- Do up the lock nuts SS3235 KEEPING THE SCREWS SS3223 FIXED.
- The mechanism will then accept the new £1 coins and exclude the old £1 coins.
